<> bash HTML CSS JS MySQL PHP SQLite

Curriculum Vitae

<Hello World!/> - I would start like this as a full-stack developer, because in the last ~15 years I have been involved in the preliminary survey, elaboration, development, introduction, operation and further development of more complex projects, either actively (as a developer, project manager, operational manager) or only as a professional consultant. Most of my experience is with WordPress and Symfony, but I have also worked with other technologies: Joomla, Laravel, Magento, OpenCart, PrestaShop, ShopRenter, Shopify, Wix, etc., etc... We moved to Karcag in August 2024, but the apartment in the XI. district of Budapest remained, so that I can use it if necessary, if there is a task in the capital. Accordingly, I am looking for new opportunities.

Constantly improve myself by challenges, exploit my knowledge and experiences successfully, and be a known, respected and popular person in society.

— my goal

\$ whoami

Most recently, I was a senior developer and operational manager at a company offering paper-based products with unique graphics (such as wedding invitations, baby birth cards, christening invitations, etc.). My main task is the construction of the webshop in Hungary and then in Germany, as well as the preparation of other countries. I managed the company, the work processes, the colleagues and made decisions, as well as developed the web store and our internal system, sometimes alone, sometimes with the help of juniors.

I like **creating**, developing custom plugins and modules and web applications. In my opinion a system should be based on four corner points: maintainability, optimization, safety and speed. In 2023 I have started to use AI opportunities, for example GitHub Copilot or ChatGPT; and I also started to make open source applications, those are available for everyone on my [public GitHub repositories](#). I have been managing virtual private servers (VPS) for years, mostly with Ubuntu operational system.

I am also extremely interested in the business world, many years ago I built a mini marketing and web agency in Miskolc, which ended in a burglary. I was an individual entrepreneur between 2006 and 2023, and from 2020 I am 50 percent owner and manager of a limited company, which operated a "zero-waste store" for just a few years during Covid. Unfortunately, unlike me, people are not interested in environmental protection, so the company remained, but not the trade.

I am a husband and the father of a wonderful little boy (born in December 2020). In August 2024 we moved from Budapest (the capital of Hungary) to Karcag, about 200 kilometers away, but the XI. district apartment has also remained, so I can be present in both places if necessary. I love watches, it's very interesting and attractive to me how complex and yet perfectly balanced, precise system can be condensed into a small space. I have an addiction: running. My dream is to complete at least one marathon, and later an ultramarathon.

Main stack knowledge

Bootstrap

PHP

MySQL

Laravel

Shopify

Symfony

WordPress

Ubuntu

Strengths & weaknesses

-  ownership approach

 entrepreneurial mindset

 leadership experience

 determined personality
-  night owl type

 perfectionism

 thinking in tasks also in private life

 essential communication

Main work experience
